ABOUT SAVOTTA

Finn-Savotta designs and manufactures high quality functional gear for demanding professional and recreational use in extreme environments.

With a focus on personal load carrying equipment and sustainment systems our product range varies from small accessories to backpacks, various sleeping gear and special purpose tents.

We operate in commercial retail, B2B and professional markets. Our customers include outdoors enthusiasts, humanitarian aid groups and military and law enforcement organizations both domestically and abroad.

Our capabilities include research, development and design, heavy-duty technical sewing, laser cutting, metalworking, automation, thermoforming, material expertise and a strong will to continuously deepen our understanding of the end-users requirements.

- Headquarters and factory in Karstula, Finland
- Factory in Tartu, Estonia
- A total of ca. 100 employees
- Founded in 1955, family owned business
- Over 50 years of co-operation with the Finnish Defence Forces
- Certificates: ISO 9001:2015, AQAP 2110 Ed D, Facility Security Clearance
- NATO CAGE: A444G

BUSINESS TO BUSINESS AND MILITARY / LAW ENFORCEMENT

We offer our services as a manufacturing partner to organizations and businesses to turn your ideas into reality, and we do so with decades of experience.

For over 60 years Finn-Savotta has been designing and manufacturing equipment for numerous customers and organizations, including military, law enforcement and emergency services. Perhaps most notably the Finnish Defence Forces for whom we have designed and manufactured everything from tents to personal load bearing equipment since the 1960's.

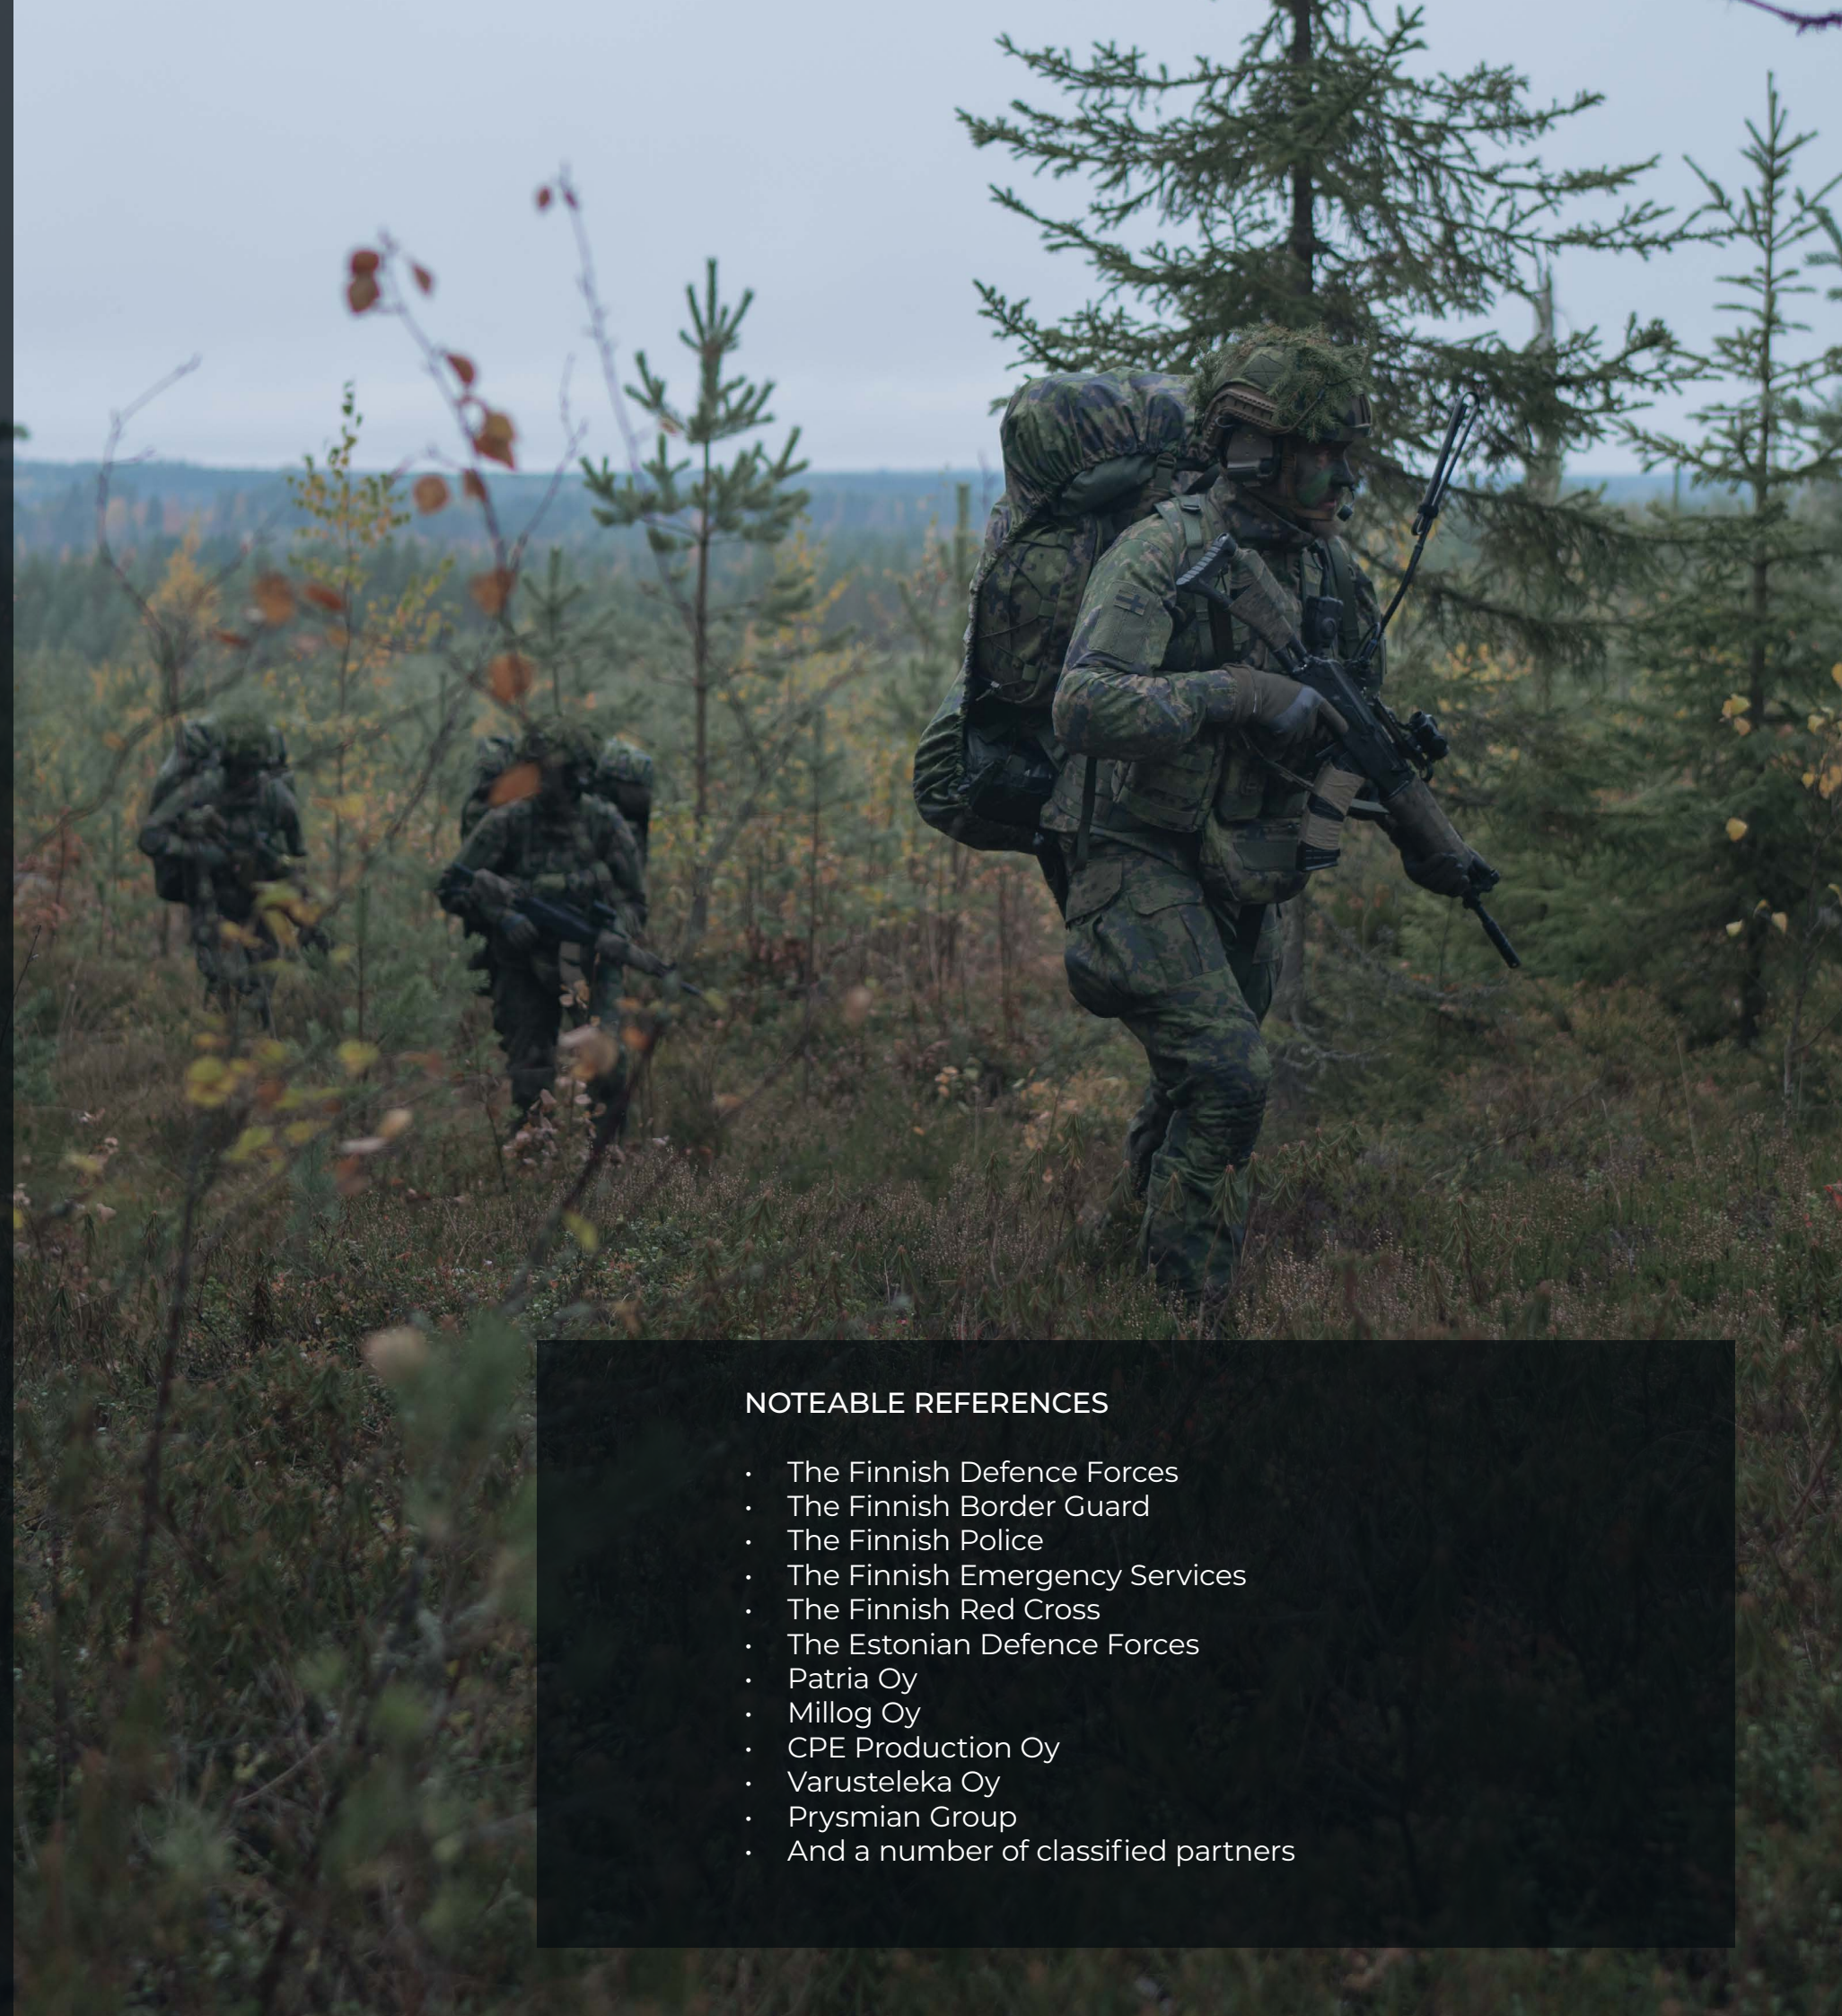

Together with our customers we design, test and manufacture customized solutions for numerous applications. Our commercial product portfolio gives a good view into our expertise and know-how, but that is just the tip of the iceberg. We have the capacity to produce hundreds of thousands pieces of gear for government contracts over multiple years, and the flexibility to quickly turn an idea into a single prototype or a small production runs of tens or hundreds of pieces.

OUR SERVICES AND ASSETS INCLUDE

- Design and prototyping in co-operation with the customer
- Offices, design and production facility in Finland provide very short response times when needed
- An in-depth understanding of the end-users requirements
- Expertise in materials and constructional solutions
- Lifecycle services for our products, including repair and maintenance
- Heavy duty industrial sewing, including manufacture of tents
- Laser cutting of textiles and other materials
- Metalworking including welding of lightweight aluminium for load bearing frames etc.
- Automation for extreme precision and repeatability
- 3D printing for prototyping and smaller production runs

SAVOTTA SYSTEMS

As a part of the Savotta corporation Finn-Savotta Systems Oy is responsible for technology and production development. We offer our services on projects that require special expertise in the fields of technology, robotics and productivity enhancement.

In addition, we develop and manufacture technical solutions especially for the defence and security sector, including surveillance and sensor systems.

Our work is based on a strong, comprehensive technical skillset and responsible, value-added project management. We help our customers to increase their technology level and productivity. Our assets and skillset include:

- Technical consulting and project management
- Robotics
- Machine vision solutions
- Industrial automation
- Factory and layout design
- 3D design and printing
- Microcircuit development
- Programming
- CNC machining
- Vacuum forming
- Lasercutting
- Automated sewing

MATERIALS

We do not use any shoddy, low quality materials. The majority of fabrics, webbing and accessories we use are the same stuff we use to make equipment for one of our biggest clients: the Finnish Defence Forces, and they are very strict when it comes to technical quality! These are our most commonly used fabrics and materials which make up the majority of our selection.

Cordura 1000D PA: an extremely strong polyamide fabric with a waterproof polyurethane coating. Cordura is known worldwide in the outdoors and military industry for their superior quality specialty fabrics.

600D PES: a regular, strong polyester fabric with a waterproof polyurethane coating. Used for minor details in many of our products, our tent ground sheets are made from a special variant with thicker rubberized coating.

210D PA: a medium weight polyamide fabric with a waterproof polyurethane coating on the backside. A flame retardant (FR) variant of this fabric is used for sauna tents and other special applications.

70D PA ripstop: a lightweight polyamide fabric with ripstop reinforcement and a waterproof polyurethane coating.

Cotton canvas: some of our old classics are still made from cotton, paraffin treated for water repellency just like in the old days.

50/50 CO/PES ripstop: our basic field camp tent fabric is a cotton/polyester blend, ripstop reinforced and mildew resistant and fire retardant (FR).

PES webbing: polyester is absolutely our most commonly used webbing material. But we don't use just any stuff, all our webbing is high quality military grade, most of it is made according to the strict specs of the Finnish Defence Forces.

Steel: stainless, galvanized, tool grade or regular, many of our products are made of or contain steel components. Depending on the application we use different types of steel, stainless being the most common.

Aluminium: most of our tent poles and backpack frames are aluminium, hand made at our own metal workshop in Karstula, Finland. Our high-precision hand welded tubular aluminium backpack frames are practically fine art.

KEIKKA

Designed as a multipurpose, user adaptable bag for everyday use, work, travel, sports and pretty much anything besides hiking. Full spectrum of carry options: carry handles, hauling handles, shoulder strap and attachment points for a padded backpack harness. Compatibility with numerous hook-to-loop accessories offer additional flexible internal organization.

Built with high quality, Finnish military grade materials and methods. This bag is made to endure anything you should need to put it through.

Steel load bearing hardware

KEIKKA BACKPACK HARNESS

This quick attach clip-on backpack harness is designed for the Keikka series of duffel bags, which feature welded steel D-rings as attachment points. Instead of building our bags with unergonomic, overly long carry handles that double up as shoulder straps we decided to make this a separate option for those who really need it, allowing us to properly purpose build each carry option for the intended function.

In the early 1990's a compact Savotta hiking pack, simply called the "608", was chosen as the starting point for the design of a new day pack for the Finnish Border Guard. This then turned into the "Light Border Patrol" as in "Lightweight Border Patrol pack", a very modern pack for it's time: narrow design for mobility, side zipper, compression straps and rifle attachment. The sturdy shoulder harness, padded hip belt and sturdy aluminium reinforced framesheet are still today features rarely seen on packs of this size!

GREEN
ART.NO. 101103536

This pack has been around since the 1980's, although originally designed as a civilian pack it was quickly adopted by the Finnish Army paratroopers for use as a daypack with their new Savotta designed and manufactured LJK packs. The 202 is a simple, robust and compact little backpack, it can easily be transported inside a larger pack, either empty or ready packed for quick use.

Jääkäri - simple, functional, made to endure

Since the 1960's Savotta has been designing and producing various equipment for the Finnish Defence Forces and Border Guard, including backpacks and personal load carrying equipment. In the early 2010's we decided it was time to give our old military and border guard pack designs a modern update. This resulted in the Jääkäri series - based on tried and tested designs but with modern functionality and materials, most notably the modular PALS attachment system and 1000D Cordura construction.

RAIN PONCHO

M: 397 g
XL: 490 g

70D PA
ripstop

5-year
warranty

A traditional hooded rain poncho, very multifunctional in all its simplicity, with press studs along the sides for closure. The rear is longer than the front for wear over a backpack. The poncho can easily be turned into a makeshift shelter by using the loops and grommets, found in the corners and on the long sides.

Available in two sizes, M for users up to 180 cm and XL for those taller than that.

warranty

This fine piece of sleeping gear was developed in co-operation between the FDF and Savotta back in the 1980's and we have since then delivered thousands upon thousands of these to the military. The design doubles up as a groundsheet, offering added comfort in wet and snowy terrain.

ART.NO. 145030036

POCKET SAW

ART.NO. 160530036

Portable wood cutting tools are often a must in the wilderness. Our pocket saw is equally suited for shelter building and firewood making as it is for clearing fallen trees from across backcountry roads.

Now don't confuse this with one of those flimsy "commando survival wire saws" you might have come across. Our pocket saw is a proper chainsaw type blade equipped with strong webbing handles. This long, strong bladed design cuts with great effect using full upper body motions, making it pretty much as energy efficient as possible for a design like this.

For transport the pocket saw rolls up into a convenient pouch made from durable 1000D Cordura. The weight and packability are key elements, this is something you can carry with you easily pretty much anywhere.

BORDER AHKIO

HAWU - a modular and flexible field tent system

The HAWU is a highly adaptable shelter system made to endure prolonged heavy duty use. It is perfectly suited for the most demanding environments, including all-year military use.

Here in the cold north we have always relied on heated shelters to stay alive and operational, the HAWU system is the latest step in the long evolutionary line of Finnish stove heated tents. What really sets the HAWU apart from it's predecessors is it's modular structure, allowing it to be split up for transport, pitched around tree trunks, extended to house more people and much more.

Its rugged construction and functionality have gained the HAWU a strong reputation among both professional and recreational users, including a number of military organizations.

Around a tree

The halves can be assembled around a tree trunk, eliminating the need for separate center poles to be carried or made on site. Another benefit of this method is camouflage, with the canopy of the tree providing excellent camouflage from aerial reconnaissance.

Suspended

Instead of using any kind of central support, tree trunk or pole, the HAWU can be hung from a line of rope attached between two trees. This frees up space inside the tent for more people or for laying out gear for maintenance and work.

With central pole

The usual, old fashioned way also works with the HAWU. We offer purpose made telescopic central poles for this purpose.

HAWU ROLL CHIMNEY

Lightweight and extremely packable, the HAWU roll chimney is a stove pipe solution designed for use with the HAWU wood stove. The roll chimney packs into a single little bundle for transport and deploys into its full size very quickly.

The embossed surface doubles the actual surface area of the chimney, resulting in more heat transfer into the tent than what a standard smooth surface is capable of. With a pack size of 30 x 9 cm and a weight of 1 kg the HAWU roll chimney is easy to transport within or outside the stove itself.

HAWU WOOD STOVE

The HAWU wood stove is designed for use with the HAWU tent system and the HAWU roll chimney. This highly engineered piece of steel boasts a lot of fine functions, including clean high temperature combustion and a clean surface for cooking on.

Some of our oldest still active products are our four field camp tents, based on Finnish Defence Forces (FDF) designs. We have been making tents for the Finnish Defence Forces since the 60's, and still do. Although these designs have gone through a lot of small improvements and variations over the decades their core features and design elements have stayed the same.

All our FDF field camp tents are:

- Stove compatible, it's cold here in Finland and keeping people in good health and spirits over extended periods in the field require warmth.
- Octagonal shape with one center pole, a simple and reliable design.
- Groundsheet compatible to make life more enjoyable especially in wet and nasty conditions.
- Overall simple in design, rugged and repairable for prolonged use, like really prolonged use: there's tons of decades old Savotta made tents still in active military use.

FDF 10

A straightforward and dependable ten person field camp tent, low in profile. Originally designed as a squad-size field camp tent for the Finnish Defence Forces.

FDF 10-JSP

A considerably taller variant of the ten-person FDF 10 field camp tent, with added windows on three sides to let daylight in. A popular choice for recreational use due to it's height and windows. Stove compatible, as all of our field camp tents. Originally designed as a field medical tent for the Finnish Defence Forces.

FDF 20

The FDF 20 is a straightforward and dependable twenty person field camp tent. Originally designed as a half-platoon field camp tent for the Finnish Defence Forces. Naturally crammin 20 people into a tent this size is not "fun", and in civilian recreational use we'd recommend this as a maybe ten person tent.

FDF 20-HQ

A considerably taller variant of the twenty-person FDF 20 field camp tent, with added windows on the front. A popular choice for recreational use due to it's height and windows. Originally designed as a command post and headquarters tent for the Finnish Defence Forces.

FDF 10

- Height: 190 cm (sides 100 cm).
- Floor diameter: 400 cm.
- Floor area: 13 m².
- Canvas weight: 15 kg.
- Pole set weight: 3,5 kg.
- Stake set weight: 5,0 kg.
- Material: 50/50 CO/PES ripstop (FR), mildev resistant and-flame retardant.
